

Greg LaPrest
Lab 7 Questions

1. The potential advantages are that you can test how a potential user might interact with the site in an automated fashion.

2. If Selenium is used, the focus might be much more on how the user interacts and the content of the website may reflect that.

3.

```
<table id="suiteTable" cellpadding="1" cellspacing="1" border="1"
class="selenium"><tbody>
<tr><td><b>MyCase</b></td></tr>
<tr><td><a href="myCase.html">myCase</a></td></tr>
</tbody></table>
```

4.

```
<tr>
    <td>click</td>
    <td>//a[@id='myLink']/</td>
    <td></td>
</tr>
```

5. Because we're dealing with websites, it makes sense. On the other hand, if the user has no experience in HTML, its a disadvantage.
